| Name | Hillhead of A Auquhirie Wind Farm |
| Capacity | 3.6MW |
| Client | Auquhirie Land Co. |
| Project Type | EIA, Project Management and Planning |

Overview

Atmos Consulting was commissioned by Auquhirie Land Company to complete an EIA and project manage a small scale wind farm in Aberdeenshire through the Planning system.

Atmos Consulting was brought in part way through the production of an EIA for a small wind farm near Stonehaven to provide specific input on design, hydrology and traffic and to provide the overall project management and planning expertise to successfully gain planning consent for the project in March 2009. Safety related constraints, which were a particular issue at this site, given the proximity of high voltage powerlines and oil pipelines, were successfully dealt with and the wind farm will be constructed in 2010/11. Atmos Consulting represented the client at all meetings with the Planning Authority and presented at the Planning Committee.
